Senior engineer with 5+ years of experience building distributed systems at Walmart and NetApp, owning Tier-0 microservices, designing event-driven architectures, and shipping AI agents.

EXPERIENCE

Software Development Engineer 3

May 2026 – Present

NetApp

Bengaluru

- **AI Billing Agent:** Designed and shipped a Generative AI-powered billing reliability agent on GCP that autonomously detects logic errors in real time — improving accuracy by 10% and eliminating manual audit cycles.
- **Runbook Agent:** Built an automated Runbook generation agent using Google ADK and LLMs that synthesizes incident signals into structured SOPs, cutting runbook duplication by 80% and reducing Mean Time To Recovery by 40%.

Software Development Engineer 3

Aug 2023 – April 2026

Walmart Global Tech

Bengaluru

- **On-Call Automation Platform:** Architected a distributed, high-reliability on-call debugging platform using MCP servers, REST APIs, and async workflows that ingests live incident data, executes root-cause analysis, and autonomously resolves P0/P1 alerts — reducing MTTR from 2 hours to 10 minutes.
- **Error Reprocessing:** Designed and implemented a distributed, multi-threaded ingestion and exception management pipeline for the Order Management System using Java, Kafka, and event-driven architecture, processing millions of daily order events and reducing unhandled exception volume by 30%.
- **High-Impact Ecommerce Initiatives:** Delivered multiple revenue generating initiatives from HLD through production deployment, contributing to a \$500M+ GMV pipeline. Owned technical strategy across distributed order management, data contracts, and downstream integrations.

Software Development Engineer 2

July 2021 – July 2023

Walmart Global Tech

Bengaluru

- **High-Throughput Backend Systems:** Owned two Tier-0 microservices handling 15,000+ TPS for event scheduling and message aggregation, maintaining 99.9%+ uptime under peak load across Cosmos (CosmosDB), Cassandra, and Kafka.
- **Real-Time Suppression Engine:** Designed a performant, real-time message suppression framework using Java and CosmosDB with low-latency query execution, halting scheduled communications during crisis events — delivered under compressed timelines with zero production incidents.
- **Kubernetes Migration:** Spearheaded migration of 5 production applications from VM-based deployments to Kubernetes, standardizing container orchestration and improving horizontal scalability and deployment consistency.

EDUCATION

Indian Institute of Technology Guwahati

Guwahati, India

M.Tech. Computer Science

2019 – 2021

Vivekandand Education Society's Institute of Technology

Mumbai, India

B.E. Information Technology

2015 – May 2019

SKILLS

Languages: Java, Python

Frameworks: Spring, REST, Langchain, ADK, MCP

Distributed Systems: Kafka, Microservices, Hazelcast, Async Processing, Event Driven Architecture

Databases: Cosmos, Cassandra, SQL, NoSQL

Cloud and Infrastructure: Azure, Kubernetes, GCP, Docker

Testing and CI/CD: Code reviews, JUnit, Cucumber, Jenkins, Maven, Git, Prometheus

AWARDS

SPOT Award (2025, 2024, 2022): For leading critical business initiatives and increasing stability for Tier 0 applications in Walmart

Wall of Fame (2022): For delivering multiple features exceeding expectations and managing 2 microservices as a fresher in Walmart
